Google Cloud

Protect sensitive data with GDC Air-Gapped

Air-Gapped I Isolated I Scalable

Google Distributed Cloud Air-Gapped (GDC Air-Gapped) enables Public Sector organizations to address strict data residency and security requirements, delivering innovation to end users.

GDC Air-Gapped does not require connectivity to Google Cloud or the public internet to manage the infrastructure, services, APIs, or tooling, and is built to remain disconnected in perpetuity.

Benefits

Full isolation: GDC Hosted is air-gapped and does not require connectivity to Google Cloud or the public internet at any time to manage the infrastructure, services, APIs, or tooling, and it is built to remain disconnected in perpetuity.

Open ecosystem: GDC Hosted is designed around Google Cloud's open cloud strategy. Open software accelerates developer adoption by leveraging existing expertise and does not require customers to learn new, proprietary systems.

Integrated cloud services: GDC Hosted delivers advanced Google Cloud services, including many of our industry-leading data and machine learning technologies.

Flexible hardware options: GDC Hosted provides customers industry-leading flexibility for hardware, including general-purpose compute and GPUs. Start small with as few as four racks and grow to hundreds as your workloads grow.
